

The PODAB Drying Cabinet

Why Use a PODAB Drying Cabinet

History

Scandinavians have been using drying cabinets for over 50 years for both domestic and professional use. Today, it is more or less a standard machine in private homes as well as in professional laundry rooms. They use the drying cabinet as a complement to a clothes dryer tumbler.

PODAB Professional Drying Cabinets

Our cabinets are manufactured in different sizes and interiors for different uses. The standard professional drying cabinet comes with hanging rail bars which are easily accessible from outside the cabinet when they are in the "swinging out" position. There are also alternatives for single bar interiors with a bar on top of the cabinet for hangers.

We also offer the specialized cabinet, FC18, with 6 removable hangers for heavy suits and overalls, i.e. fire suits. The FC18 efficiently dries 6 pairs of overalls and offers hangers for boots, gloves and other station wear.

Why use Drying Cabinets?

Today's technology with new controls and accurate humidity and temperature sensors make the cabinets very time-efficient and energy-saving. Here are a few very good reasons to consider using drying cabinets:

1. Gentle

The drying cabinet dries efficiently without any friction to the garment at exactly the right temperature and humidity.

2. Low Energy Costs*

New controls and fans systems have made the cabinets very energy-efficient.

3. Efficient*

Drying is accomplished in about the same time as tumble drying.

4. Garments last longer

Due to the gentle drying action, the lifetime of the clothes is longer and the after treatment of the garment is minimal.

5. Low maintenance

The fan systems and controls are reliable. There are few moving parts and no lint filters to clean after each use.

6. Long product lifetime

After decades of experience it is shown that the cabinet normally has a much longer lifetime than the conventional tumble dryers, due to the sturdy construction and the fewer moving parts.

7. Excellent addition to a regular dryer

Studies show that up to 20-30% of garments we wear daily should NOT be tumble dried and many garments feature a do not tumble dry symbol. A drying cabinet is ideal for delicate garments that are not suitable for tumble dryers.

8. Environmentally-friendly

PODAB is an environmentally-friendly company where all employees attend a course once a year to stay environmentally conscious. All of our designs and products are made to be environmentally-friendly, efficient and as ergonomic as possible. *We care about your future.*

9. Ergonomic

All PODAB's products are designed with maximum comfort in mind.

10. Latest technology

Our Research and Development Team continuously stays on the cutting edge with the latest technology and design

* We recommend soft-mounted, high-spin professional machines for the best drying results.
